THE English text was printed from a manuscript copied from Hakluyt's version published in 1601.

We learn from his "Epistle Dedicatore," that "it was first done into our language by some honest and well affected marchant of our nation."

Hakluyt was not the man to be contented with a translation if better materials could be obtained, and he appears to have made diligent inquiry after the original, but without success.

More fortunate than he, the Hakluyt Society has been able to obtain sight of a copy of the original, published in 1563,<sup>1</sup> and believed to be unique. This valuable work is the property of an American gentleman, Mr. John Carter Brown, of Providence, Rhode Island, who kindly permitted Mr. R. H. Major, of the British Museum, to have it copied ; from this copy

<sup>1</sup> The *Biographie Universelle* speaks of an edition in 12mo. printed in 1555.

the Portuguese text has been printed. The *Nouvelle Biographie Générale* calls this work “rarissime,” but speaks of two copies, one in the National Library at Lisbon, the other in the Library of D. Francesco da Mello Manuel.

On comparing Hakluyt’s version with the original, some omissions and additions have been noticed. It is not possible at this date to trace the causes of the former, probably they arose from inadvertence in the translator; they have been supplied within brackets: the latter are due to Hakluyt, who, failing to obtain the original work, supplied what he thought necessary from the “original histories,” and to him also are probably due the marginal references.

Antonio Galvano was born at Lisbon in 1503. He embarked for India in 1527, where he soon distinguished himself.

He was selected by the Viceroy Don Nunho da Cunha, to reduce and govern the Moluccas. After a time he succeeded, as much by valour as by judicious conduct, in bringing these islands under Portuguese sway; and by exercising strict justice and kind dealing towards the natives, both rare in those days, he earned the title of the “father of the country.”

But his deeds were not limited to earthly conquest. Galvano, so intrepid at the head of his troops,

might also be seen, with a crucifix in his hand, preaching the Gospel publicly, whereby he became known as the “Apostle” of the Moluccas.

Having spent many years and much treasure in benefiting the people committed to his charge, he was recalled to Europe. But calumny and envy appear to have been at work, and he was coldly received by his sovereign, John III. Finally, he was reduced to such a state of indigence, that he was fain to find refuge in the Royal Hospital at Lisbon, where he died in 1557.

Galvano was a man of rare talent, well versed in religious and secular knowledge, and also well instructed in warlike arts, both military and naval. Faria y Sousa sums up his high qualities in these words:—<sup>1</sup>

“ His fame will never perish so long as the world endures ; for neither weak kings, nor wicked ministers, nor blind fortune, nor ages of ignorance, can damage a reputation so justly merited.”

He spent the latter part of his life in compiling an account of all known voyages, and thus he may be styled the founder of historical geography. His papers were left at his death to his friend Don F. y Sousa Tavares, who published them.

<sup>1</sup> *Asia Portuguesa.*

This short sketch of an illustrious and hardly used man is taken from the *Biographie Universelle Ancienne et Moderne*, 1816, and *Nouvelle Biographie Générale*, 1857.

The editor's labours have been confined to superintending the press, and he has been careful to retain the quaint language and spelling both in the original and translation. Perhaps an apology is due for his having undertaken this work, possessing only a slight and superficial knowledge of the Portuguese language. If excuse be necessary, he has to plead that the work was considered to possess great interest, and that no one else seemed inclined to undertake the labour. He has been relieved from some responsibility by the kindness of his Excellency the Count de Lavradio and the gentlemen of the Portuguese legation ; but his special thanks are due to M. le Chevalier dos Santos, who kindly undertook to go over the proofs, and who thereby enabled him to supply many deficiencies and avoid many errors.

LODINIZ  
IMPENSIS. — G. — BISHOP.

THE EPISTLE DEDICATORIE.

---

To the Right Honorable Sir Robert Cecill,  
Knight, principall Seeretarie to her Maiestie,  
Master of the Court of Wards and Liveries,  
the worthy Chancellour of the Universitie  
of Cambridge, and one of her Majes-  
ties most honorable privie  
Counsell.

RIGHT Honorable, while I went about to publish our English Voyages and Discoveries, I was advised by master Walter Cope, a gentleman of rare and excellent parts, to draw them into a short sum, adding that in his opinion that course woulde proove most acceptable to the world, especially to men of great action and employment. Although in that worke then under the presse I could not conveniently alter my course, yet holding his advicee, as in many things else, so in this, for sound and very good, I heere present unto your Honour a briefe Treatie most agreeable to the same. The authour whereof was one Antonie Galuano, a Portugall gentleman : of whose pietie towards God, equitie towards men, fidelity to his Prince, love to his countrey, skill in sea causes, experience in histories, liberalitie towards his nation, vigilance,

valour, wisedome and diligenee in restoring and settling the decaied state of the Isles of Malueo, (where he remained sixe or seven yeeres governour,) if it please your Honour to read Fernando Lopez de Castagneda, or Ioannes Maffeius in their Histories of the East Indies, you shall finde more written in his singular commendation, then a large Epistle can well comprehend.

The worke though small in bulke containeth so much rare and profitable matter, as I know not where to seeke the like, within so narrow and streite a compasse. For heerein is orderly declared, who were the first discoverours of the world since the time of the flood : by what waies from age to age the spieerie, drugs, and riches of the East were conveied into the West : what were the causes of the alterations of those courses, as namely the changes of empires and government : the ceasing of all trafficke for many yeeres by the Gothes invasion of the Romane Empire : the rising up of the Mahumetane sect ; with their overrunning of Africke and Spaine : the renewing againe, after many yeeres disturbance, of the trafficke and entercourse of the East Indies ; first by the califas of the aforesaid seet : and eftsoones by the Venetians, Ienowais and Florentines. Then followeth the taking of Ceuta in Barbarie by John the first king of Portugall of that name, in the yeere of our Lord 1415, whose third sonne Don Henry (which he had by the vertuous Ladie Philippa, daughter of John of Gante, and sister to Henry the fourth, King of England) was the first beginner of all the Portugall

discoveries, and continued the same for the space of fortie and three yeeres even to his dying day. By whose encouragement the Kings of Portugall found out with much patience and constancie the last way of the bringing the Spieerie into Europe by the Cape of Buona Sperança ; and for these hundred yeeres past have become the chiefe Lords of the riches of the Orient. By emulation of which their good endevors, the Antiles and the West Indies began to be discovered by the kings of Spaine. The infancies of both which most important enterprises, the progresse of the same from time to time, the discoveries of islands, rivers, baies and harbours, of many rich provinces, kingdomes, and countries ; the erecting of castles in sundry convenient islands and places, with the drawing of trafficke unto the same, where, when, by whom, and by whose authority is heere succinctly and faithfully recorded. So that if it please your Honour at your convenient leisure to take a sea card or a mappe of the world, and earie your eie upon the coast of Africa from Cape de Non, lying on the mayne in 29 degrees of northely latitude, and follow the shore about the Cape of Buona Sperança till you come to the mouth of the Redde Sea, and passing thence along by the countrey of Arabia crosse over to India, and doubling Cape Comory compasse the gulfe of Bengala, and shooting by the citie of Malacea through the Streite of Cincapura, coast al the south of Asia to the northeast part of China, and comprehend in this view all the islands from the Açores and Madera in the West, to the Malucos, the Phillip-

pinas, and Japan in the East : you shall heere finde by order, who were the first discoverours, conquerours and planters in every place : as also the natures and commodities of the soyles, togither with the forces, qualities, and conditions of the inhabitants. And that which I mention of the Orient, is likewise to be understood of the Occident.

Now touching the translation, it may please you, sir, to be advertised that it was first done into our language by some honest and well affected marchant of our nation, whose name by no meanes I could attaine unto, and that as it seemeth many yeeres ago. For it hath lien by me above these twelve yeeres. In all which space though I have made much inquirie, and sent to Lisbon, where it seemeth it was printed, yet to this day I could never obtaine the originall copie ; whereby I might reforme the manifold errours of the translator.

For whereas a good translator ought to be well acquainted with the proprietie of the tongue out of which and of that into which he translateth, and thirdly with the subject or matter it selfe : I found this translator very defective in all three ; especially in the last. For the supplying of whose defects I had none other remedie, but to have recourse unto the originall histories, (which as it appeereth are very many, and many of them exceeding rare and hard to come by) out of which the authour himselfe drew the greatest part of this discourse. And in very deede it cost me more travaile to search out the grounds thereof, and to annexe the marginall quotations unto the work, then the translation

of many such bookeſ would have put me unto. Of which quotations there is yet a farther ſeue, to wit, that ſuch as haue leaſure ſufficient, and are deſirous to reade theſe things more at large, (for brevitie oftentimes breedeth obſeurtie) may fully ſatisfie their deſires by having reeourſe by the help thereof to the pure fountaines, out of which theſe waters which are drawne are for the moſt part moſt ſweet and holsome. Now if any man ſhall marvel, that in theſe Diſcoveries of the World for the ſpace almoſt of fewer thouſand yeeres here ſet downe, our nation is ſcarce fewer times mentioned: hee is to understand, that when this author ended this diſcourse, (which was about the yeere of Grace 1555) there was little extant of our mens tranvailes. And for ought I can ſee, there had no great matter yet come to light, if myſelfe had not undertaken that heavie burden, being never therein enterained to any purpose, until I had reeourſe unto yourſelfe, by whose ſpeciall favour and bountiful patronage I haue been often much encouraged, and as it were revived. Which traiales of our men, because as yet they be not come to ripenes, and haue been made for the moſt part to places firſt diſcovered by others, when they ſhall come to more perfection, and become more profitable to the adventurers, will then be more fit to be reduced into briefe epitomes, by my ſelfe or ſome other endued with an honest zeale of the honour of our countrey. In the meane ſeauon nothing doubting of your favourable acceſſation of this my labour, I humbly beſeech the author of all goodnes to replenish and en-

rich you with his best blessings, long to protect and preserve your Honour to the profitable service of her Majestie, and to the common benefit and good of the Realme.

From London this  
29. of October  
1601.

Your Honors Chaplein, in all dutie  
most readie to be commanded,

RICHARD HAKLUYT.

ANTONIE GALUANO vpon his death bed left vnto me in his testament among his papers this booke. And because I am certaine he ordained it to bee presented vnto your Grace, I have thought good herein to fulfill his wil and testament, though in other things I have done nothing, the fault remaining not in me. And by all reason this treatie ought to be set foorth by a Portugall, seeing it intreateth of the variable waies from whence the pepper and spices came in

DEXANDO me Antonio Galuão que deos tem por seu testamenteiro, achey antre outros seus papeis este quaderno: & porque sou certo q' elle o ordenou pera o apresentar a vossa illustrissima senhoria, quis ao menos nisto somente comprir sua vontade, pois em seu testamento nam tenho comprido nenhña cousa, nam por minha culpa. times past into our partes, and also of all the navigations and discoueries in the old time. In both of which things the Portugals have most trauailed. In this treatie and in nine or ten bookees of things touching Maluco and India (which the Cardinall willed me to give to Damian de Goes, saying that he should content me, for otherwise I could not deliuere them) this true Portugall occupied himselfe against the vnfortunate and sorrowfull times which he had been in (which were all ended before all our daies and times): for when he received the captainship and fortresses of Maluco, all the kings and gouernours of all the ilands about being agreed to make war against the Portugals, vntill such time as they might drive them all out of the countrey, he fought against them all with onely 130 Portugals, when they were all together, and strong in Tidore; and he gave them the ouerthrow and killed their king, and one Ternate,<sup>1</sup> the principal author of that war, and he tooke from them their fortresse: so upon this victorie they submitted themselves,

partes: & assi de todas as nauegações & descobrimentos antigos & modernos: ambas estas duas couisas os Portuguesees tem feito muita auantagem ao passados. Em este traetado com noue ou dez liuros das couisas de Maluco & da India, que me o Cardeal mandou dar a Damiam de Goes, dizendo que mo<sup>2</sup> satisfaria (que doutra maneyra eu nam lhos podia dar), se ocupou este verdadeiro Portugues contra os infortunados & tristes tempos em que se via (como tudo passou áte nossos olhos & tempo), porque entregandolhe a capitania & fortaleza de Maluco cõ todos os Reys & senhores de todas as ylhas juntos, & conformes a fazer a guerra aos Portuguesees ate os deitar de todo fora da terra, pelejou com todos elles com soo cento & trinta Portuguesees estando todos juntos & fortes em Tidore, & os desbaratou & matou a el rey, & do Ternate pŕincipal autor da guerra, & lhes tomou a fortaleza: com a qual vitoria logo se renderam & vieram á obediencia & seruicio del rey nosso señor.

and came under the obeisance and service of our King of Portugall. Herein two things happened of great admiration. The first, that all the kings and gouernours of Maluco agreed togither against vs, a thing that never fell out, nor yet credible to be like to happen: for they are ever at variance among themselves. The seconde, that the Cap- taine of Maluco with onely his ordinarie soldiers should have the victorie against so many being all together. For sometimes it happeneth that some of the captaines of Maluco with many extraordinarie soldiers besides their ordinaria, yea and with the aide of all the kings and lords of Maluco in their favour and aide, went againste one king onely of them, and came backe againe with losse. So there may be reckoned three notable things done in India, I say of qualitie (but of more quantitie and importance there have been others); which were the taking of Muar by Emmanuel Falcon, and the winning of Bitam by Peter Mascarenas, and this, whereof we presently treat. For all these three deedes seemed to be impossible to be atchieved, considering the small quantitie of soldiers which the captaines had in giving

Duas cousas socederam aqui de grande admiraçam: a primeira serem todos os Reys & senhores de Maluco juntos & conformcs contra nos (cousa q' nunca acõtecco nẽ se cree q' possa acõtecer por quã diferentes sempre sam antre si). A segunda o capitam de Maluco com soo a gente ordinaria, auer victoria de todos elles juntos, que per vezes acontecko que algüs capitães de Maluco com muita gente extraordinaria, alem da sua ordinaria, & com tolos os reis & senhores de Maluco em seu fauor & ajuda, foram sobre hum soo rey delles, & vieram de là cõ muita quebra. Que se pode dizer, q' tres feitos grandes se fezeram na India, digo em calidade (q' de mais importancia & de mayor quantidade ouue outros) os quas sam a tomada de Muar por Manoel falcão, a de Bitam por Pedro mascarenhas, & este de que tratamos, porq' todos estes tres feitos pareciã impossivel auerẽ os capitães vic-

the enterprise against so many ; with the order and maner by them ordained how and which waies to obtaine their purpose as well by their enimies as by themselves. And they could not be atchieved otherwise but by using a meane and order not thought of at the first by the Portugals, nor yet ever suspected by their enimies. And, besides this, his father and fower of his brethren were all slaine in the king's seruice. And he now being the last of his linage, caried with him into Maluco woorth ten thousand crusadoes [which by share of commercial speculations, and loans, and salaries paid to him, was all gained at Diu<sup>1</sup>], which he spent not in idleness, nor yet in play, but only in bringing of many kings and innumerable townes unto our holy faith, and in the preserving of Maluco, employing all his power and strength that all the cloues might come vnto the hands of the kings highnes, which with Maluco yielded unto him every yeere five hundred thousand crusadoes ; being all

E alem disto sendo seu pay & quatro yrmāos seus todos mortos em seruiço del rey : & sendo elle ja o derradeiro de sua linagem, & leuando cōsigo fazenda a Maluco que valia dez mil cruzados, de contratos q' com partes fez, & emprestemos & ordenados, que lhe pagarão, tudo empregou em Dio : & os gastou, nam em jogos, nē em outros maos modos, se nam soo em trazer muitos reys & innumeraueis peuos<sup>2</sup> á nossa saneta fee como em seu tempo fez, & na guerra, & em co'seruar Maluco, & em trabalhar & poer<sup>3</sup> todas suas forças, pera que todo o crauo viesse á mão de S. to his great preiudice, let, and hinderance. For if he had gathered cloues for himselfe, as the captaines of Maluco haue done and doe, then he had come home very rich. But when he came home into Portugall in great hope (such is the simplicite of the best natures) to be rewarded for his good service, and to be more fauored and honored, then if he had brought home with him an hundred thousand crusadoes, he was greatly deceived. For he found neither favour, nor yet honor, but onely among the poor and miserable, to wit, in an hospitall, where he was kept seventeene yeeres vntill the hower of his death ; and there he had allowed vnto him his winding sheete to burie him in ; and the brotherhood of the convent prepared for his buriall as for a poore courtier cast off by all men, leaving himselfe indebted in two thousand crusadoes, whereof part came out of India, and part thereof many of his friends had lent him to maintaine him in the hospitall ; for in all these seventeene yeeres he had not of his highnes for to helpe himselfe with so much as one riall of plate, nor yet I of the booke which I deliuered received any thing to discharge his will with

So that cuen as he was extreme painfull in the performance of his service, so he was the like in the things sounding vnto the perfecting of the same,<sup>5</sup> (which was the cause that he was brought vnto the state that he died in). For he could not see the qualitie of the time, but onely those of his great seruice, by reason of the great charges that it stood him in. And his saying was, that he was borne, not for to say that his constellation was in the wars victorious, but in the ouercoming of kings by the arte of

In which of all these he had most contentation it cannot easily be determined. Wherefore your noble Grace may see, that this treatie and the others were made with sighes and afflictions which his inferiour will might have raised vp in him against his superiour reason. Neither was he willing to take for his remedie that which that great Turke *Zelim* sonne to the great *Mahumet* did, for he tooke Constantinople and died in Rome, who vsed to make himselfe drunke, because he would not remember the great estate which he lost: nor yet woulde he give eare vnto those things which many of his friends would tell him, wishing he would settle his mind out of the kingdome (for otherwise he should neuer be able to live): whereunto he answered, that in this point he would rather be compared vnto the great *Timocles* the Athenian, then to be like the excellent Romane *Coriolanus*. Which is a goodly example of a true and faithfull Portugall. Though it were not so as I doe say,

WHILE I had a desire to gather together some olde and some new discoueries, which haue beene made by sea and by land, with their iust times and situations ; they seemed to be two things of so great difficultie, that being cōfused in the authors of them, I determined once to desist frō any such purpose. For touching the course of time the Hebrewes declare, that from the beginning of the world to the flood were 1656 yeeres. The Seuentie Interpreters make mention of 2242. And S. Augustine reckoneth 2262. In the situations likewise there be many differences. For

But<sup>1</sup> considering better with my selfe, that the difficulties are opened and the differences amended by others of more exact judgement and vnderstanding therein, I purposed notwithstanding to proceede in this worke<sup>2</sup> of discoueries.

Some there be that say, that the world hath fully beeene discouered ; and they allege this reason, that as it hath beeene peopled and inhabited, so it might be frequented and navigable, and the rather for that the men in that age were of a longer life, and of lawes and languages almost one.

For though it had been so once, yet the same would haue beeene lost again by the malice of men, and the want of justice among the inhabitants of the earth. But because the best and most famous discoueries were made by sea, and that principally in our times, I desire<sup>3</sup> to

Some affirme that they were the Greekes, others say the Phœnicians, others also the Egyptians. The people of India agree not hereunto ; affirming that they were the first that sailed by sea : namely, the \*Tabencos, which now we call the Chinois. And they alleage for the prooфе of this, that they be y<sup>e</sup> lords of the Indiaes, even vnto the Cape of Bona Sperança, and the Island of S. Laurence, which is inhabited by them and al along the sea ; as also the Jauaes, Timores, Celebes, Macafares, Malucos, Borneos, Mindanaos, Luçones, Lequeos, Japones, and other islands, being many in number, and the firme lands of Cauchin-China, Laos [Siamis], Bramas, Pegu, Arracones, till you come vnto Bengala : and besides this, New Spaine, Peru, Brasil, the Antiles, with the rest adioining vnto them, as appeareth by the fashions and maners of the men and women, and by their proportions, hauing small eies, flat noses, with other proportions to be scene. which is as much to say, as the countreies of China. Further it appeareth by histories, that the arke of Noe rested upon the north parts of the mountaines of Armenia, which stands in 40 degrees and upwards: and that immediately thereupon Scythia was first peopled, for that it is an high land and appeared first after the flood. And seeing the prouince and countrey of the Tabencos is one of the chiefest of all Tartarie, as they report, it is to be thought<sup>1</sup> that they were of the most ancient inhabitants, and men of the most ancient nauigations<sup>2</sup> [since in them that country terminates on the east], and the seas being as calme as the riuers be in those parts [by cause of] lying between the Tropicks, where the daies and nights do not much differ, as well in the howers as in y<sup>e</sup> temperature: where there blow no outragious windes, to cause the waters to rise or be troubled. It is further said, that the people of China were sometimes lords of the most part of Scythia, and sailed ordinarily along that coast, which seemeth to reach vnto 70 degrees toward the north. Cornelius Nepos is the author of this, who particularly affirmeth, that in the time that Metellus, the fellowe consul of Afranius, was proconsul in France, the king of Suevia sent vnto him certaine Indians, which came thither in a ship<sup>2</sup> from this countrey, comming by the north and by the flats of Germanie. And it is probable that they were people of China, for that they from 20, 30, and 40 degrees vpwards haue strong ships and clynchers,<sup>3</sup> that can well brooke the seas, and indure the cold and intemperature of such northerly regions. As for Cambaia there is ship-

As for those which escaped the destruction of the flood, they were therewith so amazed, that they durst not descend into the plaines and lowe countreies, but kept the hils. And we reade of Nimrode, who 130 yeeres after the flood built the Tower of Babell, intending thereby to sauе himselfe if there should come any more such floods.

Therefore it seemeth, that they which first came to be sailers were those which dwell in the east in<sup>2</sup> the prouince of China : although others contrariwise hold them which dwell in<sup>3</sup> the west, as in Syria, to haue vsed the trade of the sea soonest after the flood. But this contention about the antiquicie of nauigation I leaue to the Scythians and Egyptians, who were at great variance and difference in this matter ; for each of them challenged vnto themsclues the honour of the first sea trauaile. But omitting all iars and differences

thereabonts, I will apply myselfe to my purposed discourse, and speake of that which histories haue left in record.

There be some wel seene in antiquities, which say that in the 143. yeere after the flood, Tubal came by sea into Spaine, whereby it seemeth that in those times nauigations were vsed into our parts out of Ethiopia.

And they also say farther, that not long after this, the queene Semyramis went against the Indians in that riuer wherof they tooke their name, and therein gaue battaile vnto the king Stabrobates, wherein he lost a thousand ships. Which being credible by the ancient historic, proueth manifestly that in those parts, in those times were many ships, and the seas frequented in good numbers.

In the 650. yeere after the flood there was a king in Spaine named Hesperus, who in his time, as it is reported, went and discouered as far as Cape Verde and the Island of S. Thomas, whereof he was prince.<sup>1</sup> And Gonsaluo Fernandez, of Oniedo, the chronicler of antiquities,<sup>2</sup> affirmeth, that in his<sup>3</sup> time the Islands of the West Indies were discouered, and called somewhat after his name Hesperides :

sobrisso : porq' todos q'rē adquirir a si esta hōra, & eu vir ao pōto do q' os nossos ātepassados deixarā escripto.

¶ Aquelles que de antiguidades se prezrāo, dizem que no anno de 143 depois do diluuiio, viera Tubal por mar a Espanha : por onde parece q' ja naquelle tēpo se nauegaua a nossa Ethiopia. E estes mesmos contam, que depois disto não muyto tempo a Raynha Symiramis fora contra os Indios : & naquelle rio de q' elles tomarā ho apellido, dera batalha a el rey Escorobatis, na qual elle perdera mil nauios : por onde parece que naquellas partes auia muitos, & muitos annos que se nauegauam.

and he alleageth many reasons to prove it, reporting particularly that in 40 daies they sailed from Cape Verde vnto those islands.

There are others that say that the like was done from this cape vnto the Islands of S. Thomas, and the Isle De Principe, and that they be the Hesperides, and not the Antiles. And they doe not differ far from reason : seeing in those times and many yeeres after they did vse to saile onely along the coast, not passing through the maine ocean sea ; for they had neither altitude nor compasse then in vse, nor any mariners so expert.

[According to the opinion of writers] it cannot be denied but that there were many countries, islands, capes, isthmos, and points, which now are grown out of knowledge, because the names of them are found in histories. But the age of the world and force of waters haue wasted and consumed them, and separated one countrey from another, both in Europe, Asia, Africa, New Spaine, Peru, and other places

Plato saith in his dialogue of Timæus, that there were in ancient times, in the ocean sea Atlantike, certaine great islands and countries named Atlantides, greater than Afrike and Europe: and that the kings of those parts were lords of a great part of this our countrey: but with certaine great tempests the sea did ouerflow it [with all it contained], and it remained as mud and shingle, so that in a long time after no ships could passe that way.

It is also recorded in histories, that fast by the Island of Cadiz, towards the Straights of Gibraltar, there was a certaine<sup>1</sup> island which was called Aphrodisias, well inhabited and planted with many gardens<sup>2</sup> and orchards, and yet at this day we haue no knowledge of this Aphrodisias, but onely a bare mention of it in ancient authors. The said Island of Cadiz is further said to haue been so large and big, that it did ioine with the firme land of Spaine.

The Islands of the Açores were sometimes a point<sup>3</sup> of the mountains of Estrella, which ioine vnto the sea ouer the

For it is held as a true and vndoubted veritie, that all islands have their roots running from the firme land, though they be neuer so farre from the continent: for otherwise they could not stand firme.

There are other histories which say, that from Spaine vnto Ceuta in Barbarie men sometimes trauailed on foot vpon drie land, and that the Islands of Sardinia and Corsica did ioine the one with the other, as also did Sicilia with Italie, and Negroponto with Greece.

there be great store of people, yet many writers affirme that it was once a maine sea vnto the foot of the mountaines ; and that the Cape of Comarim, and the Island of Zeilan were all one thing. As also that the Island of Samatra did ioine with the land of Malacca by the flats of Caypassia ; and not farre frō thence there stands now a little island, which few yeeres past was part of the firme land that is ouer against it.

Furthermore it is to be seene, how Ptolemy in his tables doth set the land of Malacca to the south of the line in three or fower degrees of latitude, whereas now it is at the point thereof, being called Jentana, in one degree on the north side, as appeereth in the Strait of Cincapura, where daily they doe passe through unto the coast of Sian and China, where the Island of Aynan standeth, which also they say did ioine hard to the land of China : and Ptolomey placeth it on the north side far from the line, standing now aboue 20. degrees from it towards the north, as Asia and Europe now stand.

Ptolomeo em suas taboas pōe esta terra de Malaca ao Sul da linha, em tres ou quatro graos daltura, ficando agora a ponta della, que se chama Ojentana em hum grao da banda do Norte (como se vee no estreito de Sincapura), onde cada dia passam pera à costa de Syāo, & China, onde està a ilha de Aynão, que tambem dizem q' foy junta cō a terra da China q' Ptolomeo assenta da parte do Norte muyto alem da linha, ficando agora mais de vinte graos della da parte do Norte, de maneira que assi Asia como Europa, ambas agora estam desta banda.

¶ Bem podia ser q' nos tempos passados, a terra de Malaca &

China did end beyond the line on the south side, as Ptolemy doth set them foorth : because it might ioine with the point of the land called Jentana, with the islands of Bintan, Banca, and Salitres being many that waies, and the land might be all<sup>1</sup> slime and oaze ; and so y<sup>e</sup> point of China might ioine with the Islands of the Luçones, Borneos, Lequeos, Mindanaos, and others which stand in this parallele : they also as yet hauing in opinion that the Island of Samatra did ioine with Java by the channel of Sunda, and the Islands of Bali, Anjane, Sambawa, Solor, Hogaleao, Maulua, Vintara, Rosalaguin, and others that be in this parallele and altitude, did all ioine with Iaua [and form one land] ; and so they seeme outwardly to those that deserue them. For at this day the islands stand so neere the one to the other, that they seeme all but one firme land ; and whosoever passeth betweene some of them may touch with the hand the boughs of the trees on the one and on the other side also. And to come neerer to the matter, it is not long since, that in the east the Islands of

Which is not to be thought maruellous; considering that which Ptolemey and others haue written in such cases, which here I omit, to return to my purpose.

After the flood, 800 yeeres, we reed that the citie of Troy was builded by the Dardans, and that before that time they brought out of the Indies into Europe by the Red Sea, spices, drugs, and many other kindes of marchandises, which were there more abundant than now they be. Whereunto, if credit may be given, we may conceaue that the sea was of old haunted and frequented, seeing that then they of the east had so much and so greate trafficke with them of the west, that they brought their merchandise vnto an hauen which was named Arsinoe, being that which at this day is called Suez, standing in 30 degrees on the north part of the Arabian Gulfe. It is also by authors farther written,

So that this Sesostris was the first king which built great caracks to trauaile this way. But this enterprise for all that took little effect. For if it had, Africa had then been made as an island all compassed with water, being no more ground between sea and sea, then the space of 20. leagues or 60 miles.

About this time the Græcians gathered together an army or fleete, which now is called Argonautica, whereof Jason and Alceus were captains-general. Strabo, alleging Aristonicus the grammarian, sheweth, that after the destruction of Troy, Menelaus the king came out of the straits of the Levant seas into the sea Atlantick and coasted Africa and Guinea, and doubled the Cape of Bona Sperança, and so in time arriued in India ; of which voyage of his there may be many more particulars gathered out of the histories. This Mediterrane Sea was also sometimes called the Adriaticke, the Ægean, and the Herculean sea, with other names, according to the lands, coasts, and islands which it passeth by, running into the great sea Atlantick, along the coast of Africa.

In the yeere 590 before the incarnation of Christ, there went out of Spaine a fleete of Carthaginian marchants, vpon their owne proper costs and charges, which sailed toward the west through the high seas to see if they could finde any land: and they sailed so farre, that they found at last the islands which now we call the Antiles and Noua Spagna: which Gonzalo Fernandes de Ouiedo saith were then discouered, although Christopher Columbus afterwards by his trauaile got more exact knowledge of them, and hath left vs an euident notice where they be. This island has three mountains which throw out fire from the base, while the summit is covered with snow, and in one of these which is called Ecla, the fire is so mild that tow will not burn, while at another part it has such force that it burns up water and consumes every thing.

It is also said that there are in this island two fountains, one like melting wax, the other always boiling, and turning every thing thrown into it to stone, keeping its proper form.

Further, there are in this island bears, foxes, hares, crows, falcons, and other birds, and wild cattle: and there is so much grass that it is mown twice for the cattle; and often they are taken from it that they may not burst.

There are also very large and misshapen fish, and so many as to frighten mariners, and with their bones and ribs a church has been built. There is no bread, wine, oil (olive) nor whereof to make it; they get light from fish oil, for everywhere God provides.]

For the trafficke grew so exceeding great, that they sent euery yeere into India a hundred and twenty ships laden with wares, which began to set saile from Myos-Hormos about the middle of July, and returned backe againe within one yeere.

The marchandise which they did carrie amounted vnto one million two hundred thousand crownes;<sup>2</sup> and there was made in returne of euery crowne an hundred. It was a vse, also, long after those daies, to passe to India by land. For so did the kings of the Soldans and the princes of Bactria, and other famous captaines, who trauailing thither and into Scythia by land, had the view of these prouinces and countreyes so farre till they came that way vnto the west,<sup>1</sup> and to the seas thereof on the north part, whereunto many marchants then did trauaile.<sup>2</sup> Marcus Paulus Venetus writeth much hereof. credit giuen vnto it; for that by the late experiences of the trauailers and marchants of these daies into those parts, the names of the countreyes, cities, and townes, [anchorages,] with their situations, latitudes,<sup>1</sup> and commodities are now found true, as he and other historiographers of that time haue reported.

In the 200 yeere before the Incarnation it is written, that the Romanes sent an armie into India by sea against the great Can of Cathaia, which, passing through the Straight of Gibraltar, and running to the northwest, found, right ouer against the Cape Finisterre, ten islands, wherein was much tinne. And they may be those which were called the Cassiterides, and being come to fifty degrees of latitude Cassiterides. they found a straight;\* and passing through it towards the west they arriued in the empire of India,<sup>2</sup> and fought with the king of Cathay, and so came backe againe vnto the citie of Rome. Which thing howsoeuer it may seeme either possible or not possible, true or not true, yet so I finde it left to be recorded in the histories of that time.

In the 100 yeere after the Inearnation of Christ, the emperour Traiane prepared an armie by sea vpon the riuers

What histories may these be?

But because he was then in yeeres and wearie with his trauaile, but especially because he found there small reliefe for his armie, he returned backe.

After that the Romanes had gotten the most part of the world, there were in that age made many and notable discoueries. But then came the Gothes, Moores, and other barbarous nations, and destroied all. For in the yeere 412 after the Incarnation of Christ, they tooke the citie of Rome: and the Vandales came out of Spaine and conquered Africa.

By all this it may appeere, that in that age all the world was in a hurly burly, and all places very tumultuous [and for four hundred years was so defaced and benighted], in so much that trafficke and marchandise ceased: for no nation durst trade one with another, neither by sea nor land: nothing as then remained stedfast, neither in monarchies nor kingdomes, signories, religions, lawes, artes, sciences, nor nauigations. Nor so much as the records and writings of such things did remaine, but were all burnt and consumed by the barbarous crueltie and vnbrideled power of the Gothes: who became so couetous and ambitious, that they purposed of themselues to begin a new world, and to roote

About this time also the island of Madera was discouered [in 32 degrees] by an English man called Macham: who sailing out of England into Spaine, with a woman of his,<sup>3</sup> was driuen out of his direct course by a tempest, and arrived in that island, and cast his anker in that hauen,

But by whom soeuer it was set out, they seeme to be the first that discouered the Canaries and landed in them, where also they tooke 150 of the islanders prisoners. The chroniclers of Portugall haue this record, that after the incarnation of Christ 1411-16, [in the month of July], king John the first of that name king of Portugall, departed from the citie of Lisbon with the Prince Don Duarte or Edward, and Don Peter and Don Henry his sonnes, with other lords and nobles of his realme, and sailed into Africa, where he tooke the great citie of Ceuta, standing on the north side thereof, betweene 35 and 36 degrees in latitude: which was one of the principall causes of the enlarging of the dominions of Portugall.<sup>1</sup>

In the yeere 1424 they write that the saide Don Henry prepared a nauie and armie to conquer these islands, wherein there went as captaine generall, one Don Fernando de Castro ; and by reason of the valiantnes and warlike behaviour of the people they had the repulse : whereupon Don Ferdinand, considering the great charge, and little or no good successe, he gave ouer the action, and returned backe againe. After this Don Henry resigned ouer these islandes to the crowne of Castile, in consideration of the aides which Betancourt had receiued. But the Castillians agree not vnto this report. For they say, that neither the kings of Portugall nor Don Henry would render the islands, till they came in question before Pope Eugenius the fourth [a Venetian] ; who fully vnderstanding the matter, gaue the conquest of the islands by order of iudgement vnto the king [Don John] of Castile in the yeere 1431, whereupon this contention ceased touching the title of the Canaries betweene the kings of Portugall and of Castile.

But none of these things were performed by them; for they returned without doing any memorable act.

In the same yeere, 1446, another esquire belonging to the king of Portugall, called Denis Fernandes, of the citie of Lisbon, entered into these discouerics, more to win fame, than to reapre commoditie by them. And he being in his voiage, came to the riuier of Sanaga, standing between 15<sup>The riuier of Sanaga.</sup> and 16 degrees of latitude towards the north, [and bordering upon the moors of Jalophos], where he tooke certaine Negroes; and not contented therewith, he went forward and discouered Cape Verde, standing in 14 degrees on the same side; and there he set vp vpon the land a crosse of wood, and then returned with great contention.

Christopher Columbus being arriued went presently into Castile with the newes of all things, and acquainted the king Fernando with the discontentednes of the king of Portugal : whereupon he and the Queene Isabella his wife sent streight word thereof vnto Pope Alexander the 6., whereat he and the Italians were in great admiration, marvailing that there was any more land besides that which was vnder<sup>1</sup> the Romanes. But the end of this matter was this : Alexander the Pope gaue these countreies by his judgement vnto the kingdomes of Leon and Castile ; with this condition, that they should labour to extirpate idolatrie, and plant the holy faith in those countreyes.

Fernando the king hauing receiued this answere, was glad of it, and sent Christopher Columbus againe on the former voyage, hauing made him admirall, and giuen him other honors, with particular armes,<sup>2</sup> and a posie written about his armes to this effect :

For Castile and for Leon  
A new world found out Colon.

In the yeere 1493, the 25 of the moneth of October, Christopher Columbus went backe vnto the Antiles, and frō Cadiz he tooke his course, hauing in his companie 17 ships, and 1500 men in them, with his brethren Bartholomew Columbus and Diego Columbus, with other knights, gentlemen, men of law, and religious men, with chalices, crosses, rich ornaments, and with great power<sup>1</sup> and dignitie<sup>2</sup> from Pope Alexander; & the 10 day after their setting foorth, they arriued at the Canaries; & from thence, in 25 or 30 daies, they sailed vnto the Antiles; & the first island that they saw standeth in 14 degrees towards the north, due west from Cape Verde, on the coast of Africa. They say that the distance from thence to the Canaries is 800 leagues. The name they gaue it was Deseada, that is, the desired or wished Island, for the great desire which the company had to come to sight of land. After that they discouered many more, which they named the Virgines, which the naturals of the countrey call the Caribas, for that the men of that countrey are good warriers, and shoothe well in bowes.

From these islands and others they went vnto the principall island there, which they of the countrey doe call Boriquen, and the Spanyards call it S. John, and thence to Hispaniola or Isabella, where they found all the men dead which they had left [from injuries (or diseases) incident to the countrey]. Here the admirall left the most part of the people to plant it,<sup>1</sup> and appointed his brethren to be gouernours there: and so tooke two ships, and went to discouer the other side of the Island of Cuba, and from thence to Jamaica. All these islands stand from 16 vnto 20 degrees of northerly latitude. In the meane time that the admirall sailed about, his brethren and they that were left with them were much troubled, because the sauages did rise against them. So that Christopher Colon went backe againe into Spaine, to tell the king and queene of his aduentures.

In the yeere 1494, and in the moncth of Januarie, there was an agreement made of the differences which were betweene the two kings of Spaine and Portugall. For the which agreement there were sent out of Portugall Ruy de Sosa, and Don John his sonne, and the Doctor Ayres de Almada: and for the king of Spaine there were Don Henry Henrques, Don John de Cardenas, and the Doctor Mal-donado. All these met in the towne of Tordesillas, and they deuided the world frō the north to the south by a meridian which standeth west from the Islands of Cape Verde 300<sup>1</sup> leagues: so that the one halfe which lay vnto the east should belong vnto Portugall, and that which lay to the west to the king of Spaine, whereby notwithstanding libertie to trauell [by sea and land] was left equall vnto both.

In the yeere following, 1495, John king of Portugall died, and Emmanuel his cosen began to reigne.

In the yeere 1496 there was a Venetian in England called John Cabota, who hauing knowledge of such a new discouerie as this was, and perceiuing by the globe that the

to 38 degrees toward the equinoctiall line, and from thence returned into England. There be others which say that he went as far as the Cape of Florida, which standeth in 25 degrees.

In the yeere 1497 the king of Spaine, Don Fernando, sent out Christopher Columbus with sixe ships, and he him-selfe prouided two ships at his owne cost, and sending his brother before, he made saile from the Bay of Cadiz, carrying with him his sonne, Don Diego Colon. It was then reported that he went to take the Island of Madera, because he mistrusted the French men, and therefore sent thither three ships: others say it was to the Canaries. But howsoever it was, this is true, that he and three more went vnto the Islands of Cape Verde, and ran along by the line, finding great calmes and raine, and the first land which they came vnto of the Antiles was an island standing in 9 degrees of latitude towards the north, ioining fast vnto the maine land, which they called La Trinidadada; and so he entred into the Gulfe of Paria, and came out of the mouth which they named Bocca de Dragone, or the Dragons mouth: and

but is smaller : it fixes itself in the flesh under the nail, and there produces so many grubs, that if not presently removed they multiply in such a way that people lose their fingers, and some become maimed for life.

There is also in these parts another vermin as large as a cat, it lives among trees, hanging from the branches by the tail, and after its young ones are born they take to a pouch, with which nature has furnished them ; in this entresol of the belly there is a teat which suckles them, whence it appears that it goes big with its young until of such age that nature delivers them, and then the young ones go to seek their own living.

There are in these islands many different fishes, and one which no one knows whether it be beast or fish : it has hands and feet like a lizard, snout and tail like a greyhound, feeds in the water, and on land among the trees, lays eggs like a fowl, from which they are produced : these have a soft shell, and if fried with oil or butter they do not thicken ; with water I do not know. When these creatures are small they pass on the surface of the water so rapidly that

they do not sink ; it further appears that at a certain season they run upon land, then turning about they go under the water along the sand, for they know not how to swim, nor have they that fashion. They are eaten during carnival and Lent.

There is also a fish called Monatim : it is large and indurated ; it has the head and countenance of a cow, and also resembles it much in its meat ; it has arms joined to its shoulders with which it swims ; its principal food is the grass that grows along the edge of the water ; it is very savoury ; it has some stones in its head which are profitable for the grief of stone, and the female has teats on her breast, with which she suckles her young, which are born living.

There is another fish called Reverso, a little greater than a span ; it has spikes like a hedgehog. They feed them in the sea in a basket tied to a long line, and take by their means monatis and other large fish, and use them as ferrets for rabbits. Here are many sardines ; these small fish are seen in Maluco and among those islands,

These were the first Portugals that with an army did run along the coast of Arabia Felix. It is there so barren, that their cattell and camels are onely maintained with drie fish brought from the sea, whereof there is such plenty and abundance that the cats of the countrey doe vse to take them.

In the yeere following, as it is reported, one Antonie de Saldania discouered the island, which in old time was called Caradis, and now Socotora, and the Cape of Guardafu, which adioineth vnto that countrey.

In the yeere 1504,<sup>1</sup> Roderigo de Bastidas obtained licence of king Ferdinando, and by the means of John de Ledesma and others of Seuill named and furnished out two ships, hauing for his pilot one John de Cosa of St. Mary Port, and he went to discouer that part of Terra firma where now standeth Carthagena, being in ten degrees and a halfe of

In which yeere and moneth<sup>1</sup> the Chineans went from Malaeca into their owne countrey, and Afonso sent with them [to Siam] (for master<sup>2</sup>) a Portugall called Duarte Fernandes, with letters [and greeting] (also, and order<sup>3</sup>) vnto the king of the Mantias, which now is called Sian, standing in the south. [Coasting along], they passed through the streight of Cincapura, and sailed towards the north, went along the coast of Patane, vnto the citie of Cuy, and from thence to Odia, which is the chiefe citie of the kingdome, standing in 14 degrees of northerly latitude. The king greatly honoured and welcomed Duarte Fernandes, being the first Portugall that he had seene, and with him he sent backe ambassadours to Albuquerque. They passed ouer land towards the west unto the citie of Tanac̄erim, standing upon the sea on the other side in 12 degrees, where they imbarked them-

The people of this countrey of Sian are people that eate of all kinde of beastes, or vermine [or fish which land and water produce]. They haue a delight<sup>1</sup> to carrie round bels within the skin of their priuie members, which is forbidden to the king and the religious people. It is said that of all<sup>2</sup> other people of those parts, they be most vertuous and honest. They commend themselues much for their chastitie and pouertie. They bring no hennes nor doues vp in their houses [nor other female thing]. This kingdom hath in length 250 leagues, and in bredth 80 [besides those who are subject to it]. Of this only kingdom the king may bring foorth into the field thirtie thousand elephants, when he goeth to warre, besides those which remaine in the cities for the garde of them. The king much esteemeth a white elephant, and (a red)<sup>3</sup> one also, [with red] (that hath)<sup>3</sup> eies like vnto flaming fire.

After that Duarte Fernandes had been with the Mantales or people of Siam, Alfonso de Albuquerque sent thither a knight called Ruy Nunnez de Acunna, with letters and ambassage vnto the king of the Seguies, which we call Pegu. He went in a Iunco of the countrey in sight of the Cape Rachado, and from thence went vnto the citie of Pera which standeth fast by the riuier Salano,<sup>1</sup> and [to] many other villages standing all along this riuier, where Duarte Fernandes had beene before, vnto the cities of Tanaçerim and of Martauan, standing in 15 degrees toward the north, and

In the end of this yeere 1511, Alfonso de Albuquerque sent three ships to the Islands of Banda and Maluco. And there went as generall of them one Antonio de Breu, and with him also went one Francis Serrano; and in these ships there were 120 persons. This year, 1513, in the moneth of Februarie, Alfonsus de Albuquerque went frō the city of Goa [by Aden] towards the Streight of Meeha with twenty ships. They arriued at the citie of Aden and battered it, and passed forward and entred into the streight. They say that they saw a crosse in the element<sup>1</sup> and worshipped it. They wintered in the Island of Camaran. This was the first Portugall captaine that gaue information of those seas, and of that of Persia, being things in the world of great account.

In the yeere 1514, and in the moneth of May, there went out of Saint Lucar one Pedro Arias de Auila, at the commandement of Don Ferdinando. He was the fourth gouernour of Castillia del Oro or Golden Castile, for so they named the countreyes of Dariene, Cartagena, and Vraba, and that countrey which was newly conquered [and brought under government]. He carried with him his wife the Lady Elizabeth<sup>2</sup> and 1500 men in seuen ships; and the king appointed Vasco Nunnez de Valboa gouernour of the South Sea and of that coast.

In the beginning of the yeere 1515 the gouernour, Pedro Arias de Auila, sent one Gaspar Morales with 150 men vnto the Gulfe of S. Michael to discouer the Islands of Tararequi, Chiapes, and Tumaccus. There was a easique, Valboa's friend, which<sup>1</sup> gaue him many canoas or boates made of one tree to row in, wherein they passed vnto the Island of pearles; the lord whereof resisted them at their comming on land. But Chiapes and Tumaccus did pacifie him in such order, that the captaine of the isle had them home vnto his house, and made much of them, and receiued baptisme at their hands, naming him Pedro Arias after the gouernour's name, and he gaue vnto them for this a basket full of pearls wayng 110 pounds,<sup>2</sup> whereof some were as big as hasell nuts of 20, 25, 26, or 31 carats; (and euery carat is fower graines.)<sup>3</sup> There was giuen for one of them 1200 ducats. In this yeere 1515, in the moneth of March, the gouernour sent oue Gonsaluo de Badaios with 80 soldiers to discouer new lands, and they went from Dariene to Nombre de Dios, where came vnto them one Lewis de Mercado with fiftie men more, which the gouernour sent to aide him. They determined to discouer toward the south, saying that that countrey was the richest. They tooke with them Indians to be their guides, and going along the coasts they found slaues marked with irons as the Portugals doe vse; and hauing marched a good way through the countreyes with great trauaile they gathered together much golde and fortie slaues to do them seruice: but one Casique, named Periza, did set vpon them and<sup>1</sup> slue and tooke the most part of them.

The gouernour hearing of these newes, the same yeere 1515, sent foorth his sonne, John Arias de Auila, to be reuenged and to discouer also by sea and by land. They went westward to Cape de Guerra, standing in little more than

In this very yeere 1515, in the moneth of May, Alfonsus de Albuquerque, gouernour of India, sent from the citie of Ormuz one Fernando Gomes de Lemos as ambassadour vnto Xec or Shaugh Ismael, king of Persia : and it is declared that they traualied in it 300 leagues, and that it is a pleasant countrey like vnto France. This Xec or Shaugh Ismael went on hunting and fishing for troutes, whereof there are many. And there be the fairest women in all the world. And so Alexander the Great affirmed when he called them the women with golden eies. (And this yeere this woorthy viceroy Alfonsus de Albuquerque died.)<sup>1</sup>

<sup>1</sup> Only in this is seen the Divine justice: and otherwise it is abundantly visible in those parts of the Antilles or Portuguese India, on account of the robberies, oppression and ills that have been committed, whence it appears that there is always a Nabuchodonosor who punishes our evil deeds, which are so great as we see. What has become of the many Spaniards, Portuguese, who gambled in the Antilles and India; of so much gold, silver, spice, drugs, pearls, jewels, and merchandise, that was brought thence? All is wasted and consumed leaving no fruit; and any one who appeared to have any soul lost his life; and besides it seems to me that whoever would embark in these matters, would never finish, not even if he lived to twice the age of Methusaleh.

In the yeere 1525 Francis Pizarro and Diego Almagro went from Panama to discouer Peru, standing beyond the line towarde the south, which they called Nueva Castillia. The gouernour Pedro Arias would not entermeddle with this expedition, because of the euill newes which his captaine, Francis Vezerra, had brought [who never reached further than the port of Pinas towards the north].

Francis Pizarro went first in a ship, having with him 140 soldiers, and Almagro went after him in another ship with 70 men. He came to Rio de San Juan, standing in three degrees, where he got two thousand pesos of gold ; and not finding Pizarro, he went<sup>2</sup> to seeke him, repenting his doings by reason of a mishap that he had.<sup>3</sup> But [attracted

In the yeere 1532 Ferdinand Cortes sent one Diego Hurtado de Mendoça vnto Acapulco, 70 leagues from Mexico, where he had prepared a small fleete to discouer the coast of the South sea as he had promised the emperour. And finding two ships readie, he went into them, and sailed [westward] to the hauen of Xalisco, where he would haue taken in water and wood: but Nunnez de Gusman caused him to be resisted, and so he went forward: but some of his men mutinied against him, and he put them all into one of the ships, and sent them backe into New Spaine. They wanted water, and going to take some in the bay of the Vnderas, the Indians killed them. But Diego Hurtado sailed 200 leagues along the coast, yet did nothing woorth the writing.

In the yeere 1534 Francis Pizarro, seeing that the two kings were gone, began to enlarge himselfe in his signories, and to build cities, forts, and townes, to haue them more in subiection. Likewise he sent Sebastian de Benalcazar, the captaine of S. Michael of Tangarara, against Ruminaguy vnto Quito. He had with him two hundred footemen and 80 horsemen. He went discouering and conquering 120 leagues from the one citie to the other, east, not farre from the equinoctiall line:<sup>1</sup> where Peter Aluarado found mountaines full of snow, and so cold, that 70<sup>2</sup> of his men were frosen to death. When he came vnto Quito, he began to inhabite it, and named it S. Francis. In this countrey there is plentie of wheate, barlie, cattell and plants of Spaine, which is very strange [and not to be expected under the line]. Pizarro went straight to the citie of Cusco, and found by the way the captaine Quisquiz (risen in armes, whome shortly he defeated).<sup>3</sup> About this time there came vnto him a brother of Attabalipa named Mango, whom he made ynga or king of the country [by that means quieting a great part

The next yeere after he made another voyage into those partes, and found the countrey abounding with victuailes, houses, and good habitations,<sup>4</sup> with many and great riuers. He sailed in one riuer toward the southwest 300 leagues, and named the countrey thereabout Noua Francia : at length finding the water fresh he perceiued he could not passe through to the South sea (and hauing wintered in those parts, the next yeere following)<sup>5</sup> he returned into France.

In this yeere 1535 Pizarro builded the citie de los Reyes vpon the riuier of Lima. The inhabitants of Xauxa went to dwell there, because it was a better country, standing in 12 degrees of southerly latitude. In this same yeere of 1535 he caused the citie of Truxillo to be builded on a riuers side vpon a fruitfull soile, standing in 8 degrees on that side. This voyage was long, and he discouered much land, suffering great hunger, cold, and other extremities, by reason of the abundance of [snow and] ice, which stoppeth the running of the riuers [at least after sunset, while at midday they melt]; so that men and horses die in those parts of the colde.<sup>2</sup> About this time Ferdinando Pisarro came out of Spaine to the citie de los Reyes, and brought with him the title of marquisate of Atanillos for his brother Francis Pisarro, and vnto Diego de Almagro he brought the gouernment of 100 leagues ouer and besides that which was discouered, and named it The New kingdome of Toledo. In the yeere 1538 and 1539, after that Diego de Almagro was beheaded, the Marquis Francis Pizarro was not idle. For he sent straight one Peter de Baldiuia with a good compagnie of men to discouer and conquerre the countrey of Chili. He was wel receiued of those of the countrey, but afterwards they rose against him and would haue killed him by treason. Yet for all the warre that he had with them, he discouered much land, and the coast of the sea toward the southeast,<sup>1</sup> till he came into 40 degrees and more in latitude. While he was in these discoueries he heard newes of a king called Leucengolma, which commonly brought to the field two hundred thousand fighting men<sup>2</sup> against another king his neighbour [who brought as many], and that this Leucengolma had an island, and a temple therein with two thousand priestes: and that beyond them were the Amazones, whose queene was called Guanomilla, that is to say, the golden heauen [whence the Spaniards concluded that there

The countreyes of Brasill and Peru stand east and west almost 800 leagues (distant).<sup>1</sup> The neerest<sup>2</sup> is from the Cape of Saint Augustine vnto the hauen of Truxillo: for they stand both almost in one parallel and latitude [of six degrees]. And the farthest is<sup>3</sup> [more than] 950 leagues, reckoning from the riuer of Peru to the streits of Magellan, which places lie directly north and south, through which countrey passe certaine mountaines named the Andes, which diuide Brasill from the empire of the Ingas. After this maner the mountaines of Taurus and Imaus diuide Asia into two parts: which mountaines begin in 36 and 37 degrees of northerly latitudo at the end of the Meditarran sea ouer against the Isles of Rhodes and Cyprus, running still towards the east vnto the sea of China. And so likewise the mountaines of Atlas in Africa diuide the tawnie Moores from the blacke Moores which haue frisled haire, beginning [at the Red Sea] (at mount Meies about the desert of Barea),<sup>4</sup> and running along vnder the Tropieke of Cancer vnto the Atlantike Ocean.

The mountains of the Andes be high, ragged [craggy], and in some places barren without trees or grasse, whereon it raineth and snoweth most commonly. Vpon them are windes and sudden blastes; there is likewise such scarcitie of wood, that they make fire of turfes, as they do in Flanders. In some places of these mountaines and countries the earth is of diuers colours, as blacke, white, red, greene, blew, yellow, and violet, wherewith they die colours without any other mixture. From the bottomes of these mountaines spring<sup>1</sup> many small and great riuers, principally from the east side, as appeereth by the riuers of the Amazones, [and Maranhan], of S. Francis, of Plata, [of St. John], and many others which runne through the countrey of Brasil, being larger then those of Peru, or those of Castilia del oro. There grow on these mountaines many turneps, rapes,<sup>2</sup> and other such like rootes and herbes. One there is like vnto Aipo or rue<sup>3</sup> which beareth a yellow flower, and healeth all kinde of rotten sores, and if you apply it vnto whole and cleane flesh it will eate it vnto the bone: for that it is good for the vnsound and naught for the whole.

It is written of this countrey that it is but smally inhabited, principally in the plaine and champion places, because the men and women goe in herds with their cattell, whereof they haue great plenty euen as the Arabians do in Barbarie, and they remooue from place to place, euen as the season serueth, and the pastures to feede their cattle. In these parts are certaine beasts almost as bigge as horses, they haue very great hornes; and they beare wooll like vnto sheepe, and so the Spaniards call them. There came vnto them also certaine barkes or boates handsomely decked,<sup>1</sup> wherein the master and principall men sate on high, and vnderneath were very blacke moores with frizled haire [as if for parade or state]: and being demanded where they had these blacke moores, they answered, that they had them from certaine islands standing fast by Sebut, where there were many of them, a thing that the Spaniards much maruailed at, because from thence it was aboue 300 leagues to the places where the black people were. Therefore it seemed, that they were not naturally borne in that climate, but that they be in certaine places scattered ouer the whole circuite of the world [like other races]. For euen so they be in the Islands of Nicobar and Andeman, which stand in the gulf of Bengala, and from thence by the space of 500 leagues we doe not know of any blacke people. But this fleete<sup>2</sup> by reason of contrary windes could not passe the streit, yet one small barke passed the same, and sailed along the coast [following the land on the right hand], and discouered all the land, till he came vnto Chirimai, (and Arequipa),<sup>3</sup> which was aboue 500 leagues, for the rest was alreadie discouered by Diego de Almagro, and Francis Pizarro, and their capitaines and people at diuers times. Now I gather by all the precedent discoueries, that the whole earth is in circuite 360 degrees according to the geometric thereof: and to every degree the ancient writers allow 17 leagues and a halfe, which amount vnto 6,300 leagues [the moderns make the degre 16 $\frac{2}{3}$ , making 6,000 leagues], yet I take it that euerie degre is iust 17 leagues, so that the circuit of the earth is about 6,200. Howsoeuer it be, all is discouered and sailed from the east vnto the west almost euen as the sunne compasseth it: but from the south to the north there is great difference; for towrdes the north pole there is found discouered no more then 77 or 78 degrees, which come to 1326<sup>1</sup> leagues: and towards the south pole there is discouered from the equinoctiall to 52 or 53 degrees, that is, to the streit which Magellan passed through (which amounteth to about 900 leagues); and putting both these saide maine sums togither, they amount to 2226<sup>2</sup> leagues. Now take so many out of 6300<sup>3</sup> leagues,

O que disto tenho alcançado he ser a redôdeza de trezentos & sessenta graos, segûdo sua geometria, a q' deram os antiguos dezasete legoas & mea, em q' se montam seis mil & trezentas, os modernos poẽ o grao em xvij & douz terços por virem seis mil legoas. Com tudo eu tenho q' sam dezasete largas, em q' saem o ambito da terra en seis mil & dozentas. Como q'r q' seja toda he descuberta & nauegada de Leste oeste, quasi por onde o sol anda, mas de Sul ao norte ha muita deferenga, porq' contra elle nam se acha mais descuberto, q' ate setenta & sete, ou setenta & oito graos daltura, em q' se montam mil & trezentas & tantas legoas. E da parte do Sul ate noucentas, por ser descuberto cincoêto & douz, ou cincuenta & tres graos, que o estreito por onde o Magalhães passara, juntas todas fazẽ em soma duas mil & dozentas,
